

ResearchCoin — Section 5.2 cohort: recurring compensation

12 of 39 addresses · cohort total 35,411,220 RSC · source: rsc-historical-distribution-and-flows.html §5.2

SCOPE — THIS IS 12 OF 39

The cohort contains **39 addresses and 35,411,220 RSC**. The source document tabulates only the twelve largest, and those twelve are what this sheet lists. The remaining 27 are not itemised anywhere in the document; recovering them requires re-scanning every outflow from Treasury 3 and the treasury distributor.

COHORT RULE — APPLIED MECHANICALLY TO FUNDING HISTORY, NOT BY JUDGEMENT

Six or more transfers received from Treasury 3 (*researchhubfoundation.eth*) or the treasury distributor, with a median gap between them of 20 to 45 days — the shape of a salary, retainer or stipend. Applied after the large-allocation rule.

This identifies a payment pattern, not a job title. It is equally consistent with salaried staff, long-running editors, retained contractors and programme grantees. Chain data cannot separate them.

ONE THING THE TOTALS HIDE

Several of these wallets sold more RSC than they were ever paid, because they also bought on the open market: the cohort acquired 8,879,377 RSC from venues for \$2,371,118 alongside its 21,951,489 RSC of sales.

Addresses were recovered from chain, not from a stored list: each wallet's first-seen date was scanned on the relevant network and the truncated form in the source document matched against that day's transfer participants. 31 of the 33 addresses across both sheets reproduce the document's *still held* figure to the token. The two that differ hold more, by exactly the amount each receives in the monthly payroll batch, and are marked. Balances re-read 15 September 2026. Links open the RSC token page for that address on the network it was paid on.
