

ResearchCoin — Section 5.1 cohort: large allocations

All 21 addresses · 46,475,863 RSC · source: rsc-historical-distribution-and-flows.html §5.1

COHORT RULE – APPLIED MECHANICALLY TO FUNDING HISTORY, NOT BY JUDGEMENT

At least 1,000,000 RSC received, the majority of it from the ResearchHub complex, across six or fewer transfers from the complex. Applied after the complex itself and before the staking-relay rule, so any wallet sending 90% or more of its outflow to the staking vault is excluded and sits in a separate cohort of three. The shape reads as investors, founders' allocations and standalone grants.

TWO THINGS TO KNOW BEFORE REVIEWING

1. No address here carries an ENS name or an explorer label. None is attributed to a named person or fund. Size and date are all that can be shown.

2. Not every entry is a grant to a holder. Two are conduits that forwarded everything onward, and one is an internal round trip back to the treasury. All three are flagged.

Addresses were recovered from chain: each wallet's first-seen date was scanned on the relevant network and the truncated form in the source document matched against that day's transfer participants, then checked against the document's own holding figures. Links open the RSC token page for that address on the network it was paid on. Read 15 September 2026.
